INDEX

Introduction to Index

All articles, editorials, features, and news items are indexed completely. In the "Departments" category, Letters, Medicine and the Law, and Deaths, are indexed completely. News items are indexed selectively for items of medical interest or association business. Medical Newsmakers, Medicine in Literature, Clinical Abstracts, and Continuing Education Directory are not indexed. These items may be located in the Table of Contents of each month's issue.

Medical terminology is based on usage in MeSH, the National Library of Medicine's Medical Subject Headings which are used in *Index Medicus*. If a term does not appear in MeSH, then the author's usage or common usage is preferred.

Initialisms and acronyms are alphabetized as if they were complete words, and not at the beginning of each alphabetical group of index terms.

There is a separate index for names and deaths. The name index contains names of authors as well as persons who are the subjects of articles or news items. The deaths are listed in a separate section of the index.
